RAJ KAPADIA

FULL-STACK SOFTWARE DEVELOPER

PROFILE

As a dedicated developer, I thrive on crafting innovative solutions and embracing continual growth. With hands-on experience in software development and a passion for collaboration, I bring adaptability, enthusiasm, and a results-driven mindset to any team. Ready to integrate seamlessly and build impactful technology together.

KEYSKILLS:

- Proficient in full-stack development, specializing in MERN and Next.js stacks for efficient application development.
- Experienced in creating Al-powered SaaS platforms, integrating technologies like OpenAl and Clerk for enhanced functionalities.
- Strong understanding of e-commerce development, proficient in payment integration with Stripe and user authentication with Clerk.
- Skilled in implementing real-time communication features using WebSocket's, particularly in chat applications.
- Familiar with front & back-end technologies such as Vite, React, Bootstrap, and Tailwind, Node, express ensuring responsive, well built and visually appealing user interfaces.
- Skilled in UI/UX design with frameworks like Tailwind CSS and Shadon-UI, ensuring visually appealing and intuitive interfaces.
- Experienced in cloud-based deployments using Vercel and AWS S3, ensuring scalability and efficient application delivery.
- Knowledgeable in version control systems like Git and proficient in CI/CD pipelines for continuous integration and deployment.
- Effective analytical person with a proactive approach to troubleshooting and debugging.

PROJECTS:

1. Multipurpose AI SAAS application (Full-Stack) View Project

MAR-2024

- Developed a comprehensive full-stack web application utilizing modern technologies such as Next.js,
 React, Prisma, and Supabase, offering various machine learning solutions.
- Implemented robust authentication and authorization mechanisms using Clerk and Stripe, ensuring secure access to sensitive data and transactions.
- Utilized Shadon-UI for designing intuitive user interfaces and replicating AI functionalities to enhance user experience.
- Deployed the application using Vercel and GitHub ensuring availability and scalability.

- Led the end-to-end development of Chatify, an Al-powered SaaS platform that allows users to chat with any PDF document, utilizing Next.js, React, and Pinecone.
- Implemented AI functionalities using OpenAI to extract and process content from PDFs, enabling users to initiate conversations based on document content.
- Utilized DrizzleORM for efficient data management and integration with AWS S3 for seamless file storage and retrieval.
- Ensured application security through integration with Clerk and Stripe for authentication and payment processing, respectively.

3. E-commerce project - LuxueLease (Full-Stack) View Project

JAN-2024

- Developed Luxue-Lease, a fully featured e-commerce platform using Next.js, React, and Redux, enabling seamless product selling and management.
- Integrated Strapi for efficient content management and Cloudinary for optimized media storage and delivery, enhancing platform performance.
- Utilized Tailwind CSS for responsive and visually appealing user interfaces, offering an engaging shopping experience.
- Implemented Stripe and Clerk for secure payment processing and user authentication, respectively, ensuring a safe and convenient shopping environment.

4. Real-Time Chat Application (MERN-Stack) View Project

DEC-2023

- Developed a real-time chat application, Chat-app, using the MERN stack (MongoDB, Express.js, React, Node.js) along with WebSocket's for seamless communication.
- Utilized Tailwind CSS for responsive and visually appealing user interfaces, enhancing the user experience.
- Implemented WebSocket's for real-time communication, allowing users to engage in instant messaging without page refreshes.

EDUCATION:

• Bachelor of Science

CERTIFICATIONS:

- Responsive Web Design <u>view certificate</u>
- JavaScript Algorithms and Data Structures. view certificate
